

PC 5300™ CARD COUNTER

Featuring Dynetics exclusive “AUTO-FOCUS”

The solid state, microprocessor control PC 5300™ gives you new levels of accuracy, convenience, flexibility and reliability.

Accuracy: The PC 5300™ uses Dynetics exclusive "dual off-center" scanning which can compensate for defective card edges. The exclusive auto-focus feature automatically and continuously maintains boxed cards at the correct height to provide perfect focal length between the scanner and the cards.

Two independent counting heads double check every count in one pass. Both counts must agree or the PC 5300™ sounds an alarm. The unit indicates where in the box the miscount occurred. During the scanning operation, all settings are "frozen" to eliminate operator error.

Convenience: Simple, push button controls. Digital readouts show both the current box count and the accumulated totals for boxes and cards counted.

The PC 5300™ automatically presets to 500 or you can preset the PC 5300™ from 1 to 999 for the card count that should be in the box. When the unit scans a box and the count matches the preset, the total is added to the accumulator. If the count doesn't match, the machine sounds an alarm and the accumulator totals are not changed. The preset feature can be turned off to scan miscellaneous count boxes.

**An Optional Printer
or Your Computer
Gives a Permanent
Hardcopy Record of
All Counts.**

The PC 5300™ is fast. A typical 500 card box can be scanned in two seconds. All boxes go in right side up, without removing any shrink wrap. You don't have to flip the box over, saving time and eliminating spills or lost cards. And you can count both CR 50 and CR 80 cards, both embossed, and/or non-embossed without operator adjustment.

Flexibility: The printer/computer audit trail option enables permanent hard copy verification of scan counts, accumulated totals and date/time stamps. Record keeping and inventory control is made easy with the Dynerics PC 5300™.

Reliability: Every time you turn on the PC 5300™, the machine runs a self-diagnostic test. Within seconds the PC 5300™ tells you everything is functioning properly.

Should service be needed, one day turnaround is standard and you can return it in its custom, overnight shipping case for fast repair.

SPECIFICATIONS:

DIMENSIONS:	Length 23"	Depth 12 1/2"	Height 6"
WEIGHT:	Operating 21 lbs.	Standard 35.5 lbs.	
ELECTRICAL:	Voltage 120V-60Hz	Current .4 amps. 48 watts.	BTU/Hour 164
COUNTING RATE:	Cards/Sec. 250		

Covered under U.S. and foreign patents.
